- Users and menu options with encrypted passwords

- Halo limits on discounts and refunds

- Discounts by line and globally

- Fast switching between users

- Small annual licence fee covering annual support

- Full Audit trail

- Scalable screen size

Where is BPoS used?

BPoS is deployed across many different retailing sectors either as a standalone product or much more commonly as an integrated solution linking to back office stock management packages and accounting software.

This ensures a complete end to end solution with a robust reliability that is hard to find elsewhere. Sitting apart from back office but still integrated means in the event of a back office failure your tills still run and will do until your back office is back up and running again when once again they can move data back and forth.

BPoS is a well trusted product and for this reason can be found in any number of public sector retail environments too such as the British Library, British Geological Survey and Liverpool Cathedral, selling anything from guide books and gifts, to pieces of volcanic rock in an effective and efficient manner.

System requirements and hardware options

- BPoS is not hardware specific and can be deployed on existing equipment if necessary

- The BPoS team, recommend the use of a touchscreen to maximise the multi-layer screen benefits of the software

- The BPoS team will be pleased to suggest the most appropriate equipment to meet your needs

- BPoS can be run on Win 7, Win 8, Win 10 and POS ready operating systems

- Integrated credit card solutions are available together with a range of pin-pads, stands and other peripherals
